DIGITAL INVESTIGATIONS

MOBILE DEVICE FORENSICS

Cellular phones can be an imperative investigation tool these days.

We use our mobile devices to work, play, connect and live our lives. For this reason, our cell phones contain infinite amounts of data which can be very helpful in civil, criminal and claims investigations. Here at IFIC, we utilize one of the global leaders in forensic tools in our mobile device extractions. We are able to image content in conversations, timelines of activity, GPS information, application information and so much more.

CELLULAR TECHNOLOGY & MAPPING

Mobile devices are transmitting signals and connecting to towers everywhere they go.

IFIC's digital forensic experts are certified in mapping cellular tower/GPS data, which allows the ability to see where a subject mobile device has traveled and in what timeframe. The Call Data Records (CDR's) from cellular providers include detailed data with the exact timing, location of towers utilized and at what degree the device connected to the towers. This information can be key in establishing the mobile device's location. IFIC can assist in providing language and securing this information from cellular companies.
